KEMPER PROFILER Native

Kemper just released KEMPER PROFILER Native, a new plug-in that brings the sound and workflow of the acclaimed KEMPER PROFILER Digital Guitar Amp to compatible music production systems (DAWs). Available as Standalone App and in AU, VST3 and CLAP formats, with AAX support planned for a later release, the plug-in is designed to fit seamlessly into studio workflows.

KEMPER PROFILER Native features the full functionality of the Profiler MK 2 and is compatible with Kemper’s leading digital guitar amp profiling units, the de facto standard for touring, studio production, rehearsing, etc. It also features Kemper’s acclaimed effects, alongside seamless switching, spillover and Kemper’s unique Morphing feature.

The plug-in offers guitarists, bass players and producers the familiar PROFILER experience directly in their DAW, making it easy to shape tones, move between sounds and keep effects trails flowing while recording or performing. Of course PROFILER Native includes access to the vast Rig collections from the big names in the business as well as Rig Exchange, the ever growing library of shared tones amongst PROFILER owners.

KEMPER PROFILER Native is available for an MSRP of €249. An introductory price of €199 is available at launch. Existing Kemper Profiler owners enjoy a dedicated discount for easy access to the next profiler platform. Guitar and Bass Players of
