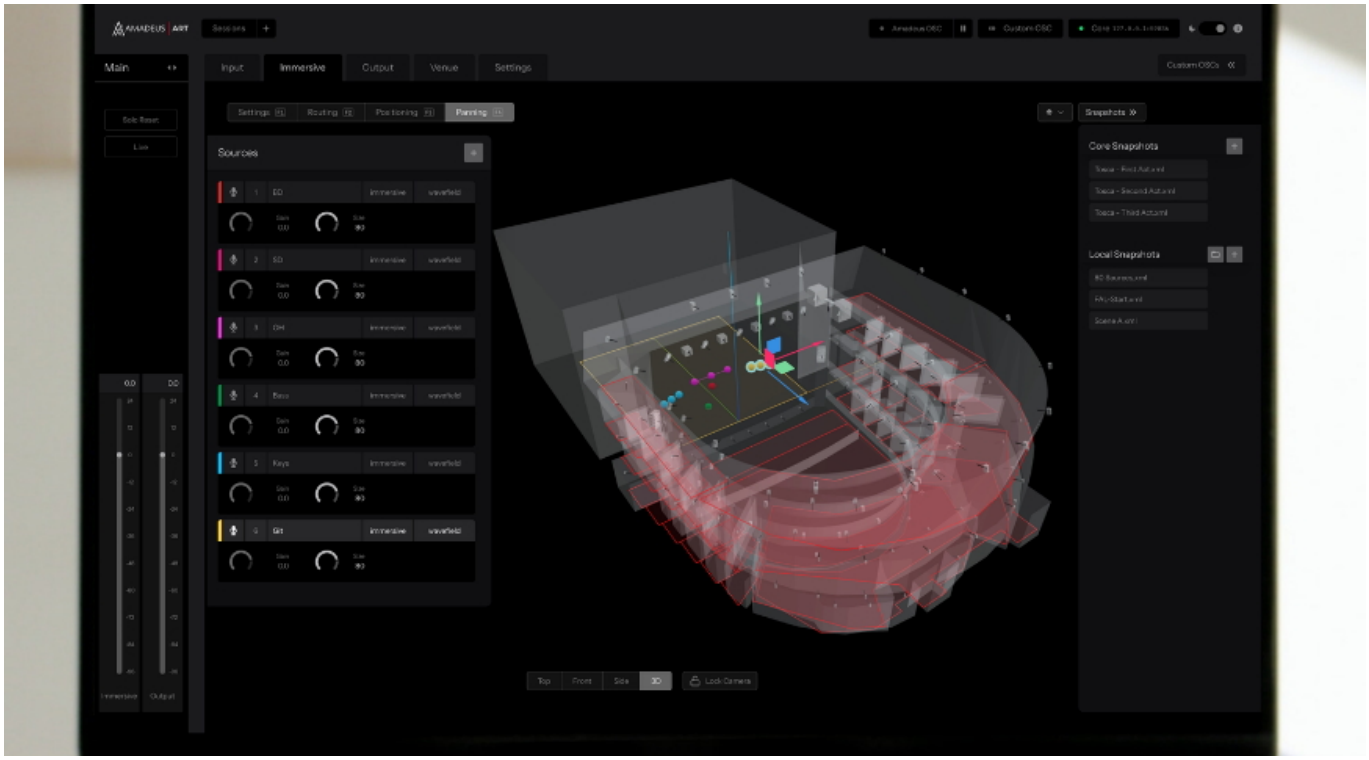
Amadeus Acoustics ART::IP Demo Licenses



Following its successful preview at ISE, Amadeus Acoustics is proud to announce that the ART::IP (Immersive Performance) module is now available for software-only demo requests. This release marks a core component of Amadeus ART's Immersive Sound, a robust solution combining the ART::Hub 2 hardware, the ART::DSP engine, the ART::Director control application and the ART::IP module.

Amadeus Acoustics is now inviting consultants, engineers, and venue operators to experience this shift in the immersive audio landscape firsthand. To demonstrate that direct experience is more powerful than words, Amadeus Acoustics has crafted a limited demo version of the ART::IP module that can run on a user's own setup. Starting March 20th, exclusive demo licenses will be granted, allowing professionals to test the power of the ART::IP module without the immediate requirement for the ART::Hub 2 hardware.

The full solution has been thoroughly engineered for real-world complexity, such as multi-zone venues and hybrid stage-surround systems, making ART::IP a ground-breaking shift in spatial audio.

- First Multizone Immersive Engine: Immersive Audio is calculated and optimised for each audience zone individually (stalls, underbalcony, parterre, etc.).
- Performer & Spatial Sources: Algorithms optimise gain and spatial coverage across complex loudspeaker setups by supporting both on-stage (performer)

Phoca PDF

and venue-wide (spatial) sources through automated precedence or minimum delay modes.
- Full 3D & Venue Related Workflow: The exact dimensions of the venue are visualised in 3D, which gives you the perfect relation from eye to ear for optimal localisations vs. generic panning views where this is just guesswork.

Shipping for the complete solution, including the ART::Hub 2 hardware, will commence in April 2026 for all confirmed orders.

"With ART::IP, we have redefined what is possible in a live environment," says Volker Werner, CTO and Co-Founder of Amadeus Acoustics. "From multiple audience zones like under-balcony to seamless stage-surround layouts, this solution manages every complexity with absolute transparency. We are providing the invisible architecture that allows immersive sound to finally scale to any venue, of any size, without compromise."

After requesting your demo license, Amadeus Acoustics invites you to begin familiarising yourself with the ecosystem immediately. The ART::Director software platform, the 3D control application, is available for free download.

- Visualise Your Venue in 3D: Directly import EASE speaker tables or 3D CAD formats to visualise and edit the full 3D layout of your room.
- Independent Setup and Operation: Users are enabled to configure and adapt systems themselves through a highly accessible, usability-driven and modern workflow.
- Precision Control: Experience the intuitive interface and advanced multi-zone design while your demo license is being processed.

From today onwards you can stop compromising on architectural limitations and rigid workflows. Take the next step beyond software and put the most advanced immersive sound tool on the market today into your own hands. Request your ART::IP demo license now and start creating environments where every seat is the best seat in the house.
