iZotope Nectar 5

Today iZotope launched Nectar 5, a groundbreaking suite of vocal plug-ins that transforms raw takes into stunning performances. With two brand-new modules, an overhauled Vocal Assistant, and Moments – an industry-first creative effects ARA plug-in – Nectar 5 promises to be iZotope's best vocal production offering yet.

iZotope's signature Vocal Assistant can set up a great-sounding vocal chain in one click, and now takes more direction about the style, key, and atmosphere you're going for in Custom Flow. If you already have a go-to vocal chain, drop any of Nectar's fourteen component plug-ins alongside the plug-ins you already trust. The overhauled Nectar 5 Elements offers the Vocal Assistant experience – including the new Custom Flow – and the Overview page, giving you an all-in-one vocal control hub.

What's new in Nectar 5

- Moments: transcribes your vocal into lyrics, then lets you apply creative effects like reverb throws, doubling, and formant shifts to words and phrases you select rather than tedious automation. An industry first in DAWs that support ARA, and compatible with dozens of languages.
- Serial Compressor: the key to vocals that sit in front of the mix, but aren't overcompressed. Stack up to 3 compressors to tame the peaks and reinforce the body of your vocal, without compromise. Defaults to the classic FET-into-Opto style that pro engineers love.
- Vocal Stabilizer: an adaptive EQ that shapes towards pro-quality vocals in Shape mode, or tames unwanted resonances in Cut mode. Includes multiband control with per-band Amount and adjustable crossovers.
- Vocal Assistant - Custom Flow: re-tuned to offer a better starting point, and now takes more direction with Custom Flow. Set the style, register, key,

modules, Intensity, and Atmosphere, or add an acapella reference for vocal matching.
- Overview page: lets you adjust key controls of Nectar’s core processors with quick shortcuts to each module for fine-tuning.
- Micro Pitch Shift: a new Dimension mode that spreads and subtly detunes your vocal for the width and weight of modern vocals.
- Creative Effects: Reverb, Delay, and Dimension get a new Wet Level control and 3-band filters, plus easy ducking for Reverb and Delay.

The iZotope Cyber Sale is here, with essential tools starting at $29 and 25% off flagships and bundles:

- Essential tools starting at $29: RX 12 Elements, Ozone 12 Elements, and Neutron 5 Elements, creative effects like Trash, VocalSynth 2, Neoverb, and
