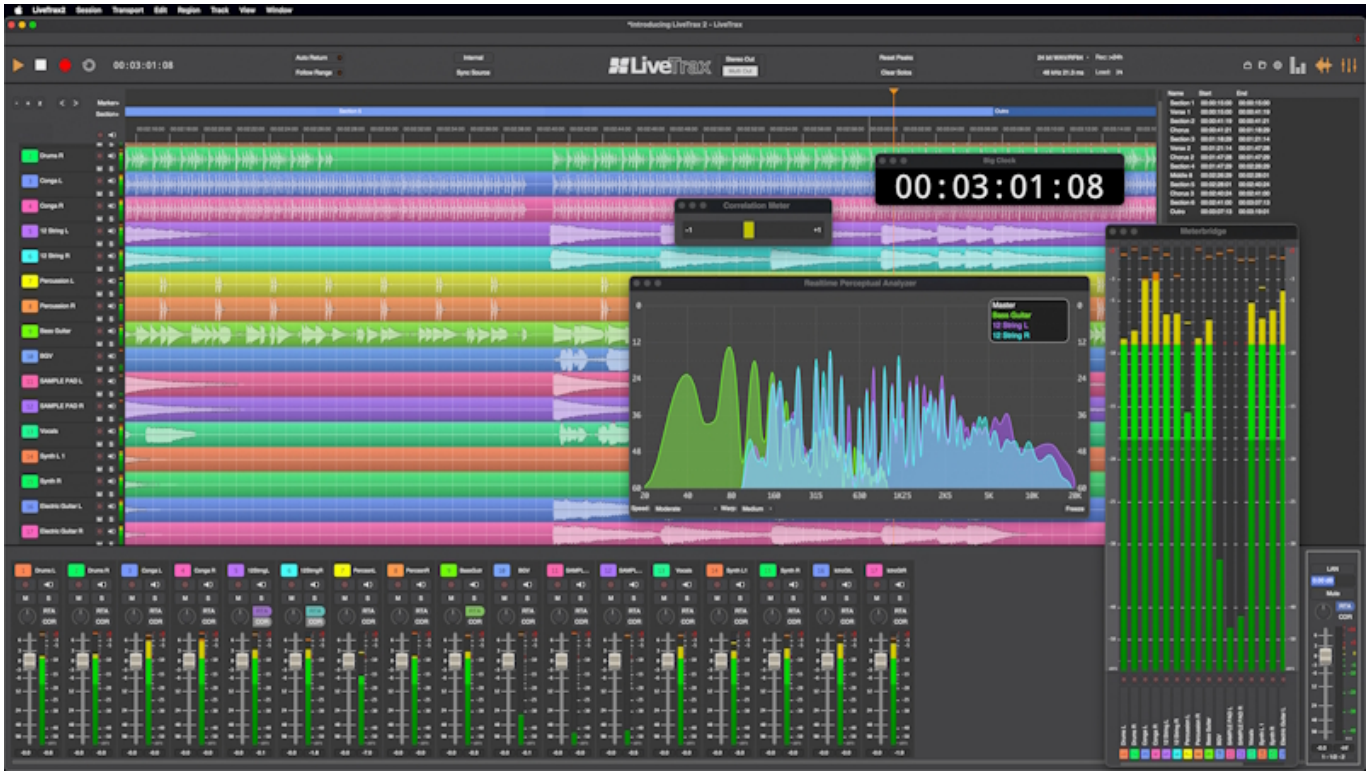
Harrison Audio LiveTrax 2



With the music festival season right around the corner, Harrison Audio announce LiveTrax 2, the latest version of its renowned live performance recording and virtual soundcheck software. LiveTrax 2, built in close collaboration with Allen & Heath and SSL Live sound engineers, delivers powerful new tools to the live sound market - making live capture and virtual sound checking simpler and better sounding than ever.

An efficient multitrack recording and virtual soundcheck software designed to capture live performances ranging from small, intimate events to large-scale concerts, LiveTrax 2 focuses on the essential tools needed to record quickly and efficiently, without complexity. The software offers seamless integration with both Allen & Heath and SSL Live consoles, while boasting several new and enhanced features such as an RTA analyzer, a phase correlation meter, input monitoring,

expanded marker functionality, and new master output controls.

Whether the intended application is recording or virtual sound checking a local performance or a major touring production, LiveTrax 2 delivers the accuracy and reliability needed to capture every show without compromise. When paired with an Allen & Heath live console, LiveTrax 2 can create markers to recall specific mixer scenes, and users can jump to follow scenes during a virtual soundcheck, synchronize tracks names, and follow transport commands directly from the console.

The software's seamless integration with A&H and SSL live consoles also eliminates the many unnecessary features of a fully featured DAW in a live sound environment, allowing the user to capture any live performance with confidence. When used with an SSL Live console, users can create markers when recalling console automation scenes, enabling smooth transitions that follow scene changes during virtual soundchecks. Additionally, SSL Live console channel names can be effortlessly transferred to LiveTrax 2 -simplifying session management and ensuring quick organization.

LiveTrax 2 is the ideal solution for capturing live performances ranging from small, intimate events to large-scale concerts and productions, focusing on the essential tools required for capturing live recordings quickly and efficiently without complication. Its user-friendly interface is simple to use for podcasting, soloists, band rehearsals, and large orchestras.
