Ambient LockitBT

The long-awaited LockitBT, also known as Lockit Bluetooth, is now available. It provides the same functionality as a classic Lockit Timecode and Sync generator - with following additional features:

- Bluetooth interface
- Remote control via LockitRemote App (available for free for iOS and Android)
- ACN Radar:
  - Monitor and control ACN devices in the app
  - Full functionality to control settings on ACN receivers with firmware 8.04
  - Discontinued ACN devices like ACL204, TinyLockit, LockitSlate Take 1 can still be monitored in the ACN Radar

LockitRemote is available for free - both for iOS and Android (soon). If you are already using the Lockit system, one additional LockitBT is all you need to view and control all of your ACN devices via the app.
