

Webinar „Transmitting Dante Streams over the Internet“

AVT Audio Video Technologies GmbH, manufacturer of telephone hybrids, audio codecs and DAB+ equipment, is hosting the webinar “Transmitting Dante Streams over the Internet” on 27.07.2026 at 15:00h (UTC+1) and also on 28.07.2026 at 10:00h (UTC+1) to introduce their MAGIC ACX DANTE WAN Bridge. Since Dante is now used in many studio environments as well as for outside broadcasts, the challenge for broadcasters and event organizers is often to transmit the Dante streams over the internet, which can cause problems due to high jitter, network delays, and different clocks on both ends. The MAGIC ACX DANTE WAN Bridge was specifically developed for such setups. In the webinar, we'll introduce the device's features and practical use cases.
