

DHD.audio withdraws from IBC 2021

Following many years of active participation in the International Broadcasting Convention, DHD.audio announces the company's withdrawal from IBC 2021 due to the current situation in Amsterdam and the wider Netherlands.

The DHD management board places health and safety above all other considerations. We do not feel justified in asking employees, partners and customers to participate in this year's exhibition. We hope to see all our partners and customers again at IBC 2022 or in other formats such as online-meetings or suitably safeguarded personal visits.

DHD.audio GmbH develops and produces digital audio studio equipment and systems for professional applications in broadcast control rooms, DJ-operated radio studios, OB trucks, SNG vans, ingest stations and edit suites. DHD also produces routing and talkback matrices, audio-over-IP interfaces and supporting software. DHD devices can be operated directly or under IP networked control. Designed and manufactured in Germany, DHD products are used successfully by broadcasters around the globe.
