

New Lawo IP-Milestone

Lawo invites broadcast and AV media technology professionals to a special online event on April 8, 2026, to unveil the next major step in its growing portfolio of IP-based solutions. This announcement will introduce a significant innovation that will make system design more efficient, more flexible, and more agile.

Two sessions will be offered to accommodate global participants - registrations can be made via the Lawo homepage:

- 10:00 CEST / 08:00 UTC / 04:00 EDT
- 20:00 CEST / 18:00 UTC / 14:00 EDT

The online event addresses a challenge familiar across production environments - from broadcast to recording studios and OB trucks to theaters, corporate AV, and live events: what if one single innovation could make set-ups faster, smarter, and more manageable across the entire production landscape?

The April 8 event will introduce a new solution developed to elevate operations in all broadcast and Pro AV setups. It is versatile, feature-laden, and designed to meet the increasing demand for smarter, more flexible, and more agile IP-based system designs.

Professionals worldwide are invited to join one of the two sessions to be among the first to discover “the ONE innovation” – and with it the next stage of media infrastructure evolution.

Lawo presents a New IP-Milestone
