ORBAN appoints Leading Technologies for Italy

ORBAN announces that Leading Technologies has been appointed, expanding the professional audio-processing solutions available to broadcasters in Italy. “It is a pleasure to be working once again with a brand that is so closely tied to our history. ORBAN will undoubtedly represent a strategically important addition to our broadcast portfolio.” Marco Porro, Vice President & CEO, Leading Technologies.

Based in Monza, Italy, Leading Technologies has operated since 1978 and serves more than 3,000 active customers. The company works across professional audio, video, LED, and control technologies, and supports customers as a distributor, consultant, designer, and system integrator. Its services include project design, demonstrations, training, technical assistance, and post-sales support.

“We are pleased to welcome Leading Technologies as part of ORBAN’s broadcast distribution network in Italy. Their longstanding experience in professional audio and broadcast technology, combined with their strong understanding of the Italian market, makes them a valuable partner for ORBAN. This collaboration strengthens our ability to support broadcasters throughout Italy by providing access to our industry-leading audio processing and content delivery solutions, backed by the expertise and local support of the Leading Technologies team.” David Day, President, Orban Labs.

The portfolio addition gives Italian broadcasters access to ORBAN processing solutions through a local provider with experience in the professional technology market and technical and commercial support capabilities.
