

Point Source Audio EMBRACE EO-7

Point Source Audio, a company with expertise in high-performance microphone technology, is unveiling the new EMBRACE Model EO-7 on-ear lavalier at NAB 2025, North Hall Booth N1669. This patented on-ear lavalier microphone delivers professional-grade sound performance tailored for content creators and compatibility with popular 2.4 GHz wireless systems from brands like RODE, DJI, Hollyland, Saramonic, Comica, and others. The EMBRACE EO-7 presents an ideal, economical solution for creators in any genre, including vloggers, podcasters, in-studio or active content.

The EMBRACE EO-7 extends the innovative form factor of its predecessors, the EO-8 and the EO-9, which are widely used in live theatre and broadcast applications. Featuring the same patented design for consistent mic placement and quick concealment, this new version of the on-ear lavalier extends the professional fit and finish for creators to easily mic up for shoots with precise mic placement and optimal coverage every time, regardless of clothing, and allowing free range of motion with no loss in audio quality. For creators striving to elevate their craft, polished audio and video production are key to building trust and engagement. The EMBRACE EO-7 is engineered to address these demands, helping creators achieve superior sound quality without compromising their visual presentation.

The EMBRACE EO-7 on-ear lavalier offers a host of features that make it an indispensable tool for content creators:

- **Practically Invisible on Camera:** The patented on-ear lavalier design ensures the mic stays securely in place while remaining nearly invisible. Alternative color-changeable earmounts (available in black, brown, and beige) allow creators to switch the mic color to seamlessly blend with hair or skin tones for a discreet, polished look.
- **Consistent Sound Quality:** Unlike clip-on or lapel mics, the EMBRACE

maintains precise placement, staying in its pickup pattern even during active movements or head turns. This wearing style ensures superior, uninterrupted audio clarity, but the mic can also be used in traditional lapel fashion.

- **Broad Compatibility:** With a standard 3.5mm termination, the mic connects to leading 2.4 GHz wireless systems from brands like RODE, DJI, Hollyland, Saramonic, Comica, and others - opening access to a broader range of creators.
- **Customizable Fit:** The mic's bendable, trimmable earmount is designed for a secure, ergonomic fit that effortlessly conforms to any user. Its lightweight, customizable design ensures all-day comfort, making it ideal for extended wear during recordings, broadcasts, or presentations.
- **Clothing-Agnostic Use:** The mic's design eliminates the need to clip to clothing, making it adaptable to any outfit or accessory while ensuring a polished appearance on camera without bulky boxes or unsightly clips.

Visitors to NAB 2025 can see live demonstrations of the EMBRACE EO-7 at Booth N1669. The demonstrations will showcase how quickly the mic can conceal, its color adjusted, and its setup completed, empowering creators to focus on content rather than equipment.

Priced at \$279, the EMBRACE EO-7 will ship this May. Each EMBRACE EO-7 package includes one omnidirectional lavalier microphone (black color), two bendable earmounts (for left and right ear wearing), two types of matching windscreens, and a cable management clip. The three models offer color customization of the microphone to blend with hair or skin tone:

- EO-7Lh-TRS-BE – Includes black mic with BEIGE earmount color accessories
- EO-7Lh-TRS-BR – Includes black mic with BROWN earmount color accessories
- EO-7Lh-TRS-BL – Includes black mic with BLACK earmount color accessories
