# RØDE Wireless ME Dual Transmitter Version

RØDE has today announced a dual transmitter version of the Wireless ME, the ultimate grab-and-go wireless mic for content creators. RØDE pioneered the ultra-compact wireless mic category with the Wireless GO, the world's first truly wireless wearable microphone system. The Wireless GO revolutionised audio for content creators with its incredibly compact form factor, pro-quality audio and in-built microphones allowing for completely wireless operation – a format that has since been replicated by numerous brands. RØDE has continued its legacy of innovation in the wireless category with the ground-breaking Wireless GO II and, most recently, the Wireless PRO and Wireless ME, both released in 2023. Now the Wireless ME will be released in a limited-edition dual set, featuring two transmitters and one receiver, available in either black or white.

The Wireless ME combines the same unmatched sound quality and innovative features that RØDE wireless microphones are revered for with unprecedented ease of use. In addition to its state-of-the-art Series IV 2.4GHz digital transmission and

universal compatibility with cameras, smartphones and computers, the Wireless ME features RØDE's ground-breaking GainAssist technology, which utilises intelligent algorithms that automatically control audio levels on-the-fly, ensuring pristine audio in almost any recording application. This makes it incredibly simple to use, delivering professional sound quality with no setup or tweaking required. It is also the only wireless microphone with a mic built into the receiver for recording audio from in front of and behind the camera simultaneously, making it ideal for capturing interviews or voice overs for video content. In short, the Wireless ME is the perfect microphone for creators who want a simple solution for capturing high-quality wireless audio with ease.

The dual Wireless ME unlocks even more possibilities for creators, allowing seamless recording of two subjects simultaneously, or even three when the in-built receiver mic is activated. The option to get the Wireless ME in white instead of the original black also makes it ideal for creators who are looking for a discreet solution when working with talent who typically wear lighter coloured clothing – from wedding videographers to business professionals – or creators who simply prefer a white aesthetic. This follows the recent release of the limited-edition white collection of RØDE products, including the RØDECaster Duo, PodMic, PSA1+ and NTH-100, and represents RØDE's ongoing commitment to making the perfect audio solutions for all types of creators.

The dual Wireless ME will be available in Spring 2024 for US $199.
