sE Electronics sE6160

sE Electronics unveils the sE6160 - a shotgun microphone, designed with IEM users in mind. The sE6160 Shotgun Microphone delivers stunning clarity, no matter where you aim it. Originally designed for the “on-stage” portfolio, the sE6160 captures natural audio effortlessly, minimizing unwanted coloration. Its tight polar pattern ensures high gain-before-feedback while reducing signal bleed in loud environments thus making it an ideal ambient microphone for great in-ear mixes, and so much more...

With a new in-house designed and handcrafted true condenser capsule with a gold-sputtered diaphragm, switchable low-cut filter, and pre-attenuation pad, the sE6160 shotgun microphone combines pristine sound with a rugged yet lightweight design. Perfect for live audio, film production, broadcasting, theater, and podcasting.
