

Telos Alliance New Omnia XII Processor

Telos Alliance, a company with expertise in broadcast audio for more than three decades, unveils Omnia XII, its brand-new flagship FM/HD/DAB audio processor at the 2026 NAB Show in Las Vegas. Omnia XII is the culmination of decades of audio processing expertise and experience from Frank Foti and the Omnia team, resulting in their best-sounding and most forward-thinking audio processor ever.

Built on a space-friendly 2RU hardware platform, Omnia XII features a color display and local controls up front, while the rear panel boasts a comprehensive array of I/O and connectivity options. Brand-new intelligent algorithms form the proven processing architecture of a Wideband AGC, 5 bands of multiband AGCs and compressors, and 6 bands of multiband limiting, plus dynamic EQ and powerful bass management tools, all feeding Frank's effortlessly loud but clean and musical new "Clemenza" FM clipper. The browser-based HTML5 remote UI features Omnia's intuitive "QuickTweak" system that simultaneously adjusts multiple, interrelated controls, making setup and tuning easy for operators of any skill level, while providing processing pros with direct access to the full suite of controls they expect in a top-tier processor.

"Many years ago, our processors grew from the thoughts and ideas that I had been crafting since the mid 1980's in the engineering shop at Z-100, WHTZ-FM in New York City. That signature sound on 100.3 FM was the genesis and foundation of what Omnia processors have become," says Frank Foti, Founder, Omnia Audio & Executive Chairman of the Board. "Along the way, each of our products has been the refinement of what ruled NYC back in the day and still rules the airwaves in the world's number one market today. Omnia XII carries that legacy forward, and we are very proud to share it with you now!"

Omnia XII was designed from the start to provide the flexibility and horsepower needed to keep up with new technology, ensuring the investment customers make today is protected for years to come. "The idea of what modern audio processing should be has shifted in recent years, and we've been watching carefully," says Geoff Steadman, Product Manager. "Omnia XII is the result, and it will put users way out in front with serious computing power, an extendable, feature-rich software architecture that allows continual performance boosts to accommodate new
