

Telos Alliance, Jünger Audio & TVU Networks Partnership

Telos Alliance, Jünger Audio, and TVU Networks today unveiled a new collaboration to integrate Telos Alliance's portfolio of cloud-enabled audio solutions directly into TVU Networks' MediaMesh platform, delivering next-generation audio capabilities for broadcasters and content creators worldwide. In today's ever-evolving broadcast landscape, audience expectations are rising, and cloud production is quickly becoming the new standard. With the integration of the Telos Alliance and Jünger Audio market-proven audio-handling tools with MediaMesh, TVU Network's clients will gain the direct ability to:

- Automate complex audio workflows. Integrated workflows help streamline productions, relieving the stress of fast-paced live and remote production environments.
- Ensure consistent, high-quality audio. An integrated suite of management and quality-control tools ensures flawless audio, from studio to field to OTT delivery.
- Leverage AI to ease manual workloads. The power of AI in Telos Alliance and Jünger Audio solutions takes the drudgery out of production work, enabling teams to focus on creativity and storytelling.

TVU MediaMesh already connects and manages production resources via a resilient, cloud-native network. With Telos Alliance technology embedded in the platform, users will be able to access capabilities including Jünger Audio flexAI for multichannel processing and Automix, Minnetonka AudioTools Server for post-production automation, and Linear Acoustic upmix, downmix, and loudness tools, all of which are optimized for distributed, collaborative workflows.

This expanded partnership underscores the companies' shared mission: Giving broadcasters and media organizations the flexibility, scalability, and quality needed to thrive in a multi-platform, cloud-first world.

Visit Telos Alliance at IBC2025, Stand #8.D37, and TVU Networks, Stand #7.B55, to find out how this innovative collaboration can work for you.
