BOOM Library ELECTRIC VEHICLES

BOOM Library, a provider of high-quality sound effects, announces the release of a highly anticipated collection: the ELECTRIC VEHICLES (EV) Sound FX Collection. Available from September 5th, 2024, this meticulously crafted compilation captures the authentic sounds of electric vehicles, providing an unparalleled resource for professionals in TV, film, gaming, and immersive experiences.

Electric vehicles are rapidly becoming a fixture in modern life, and with that comes the need for a sound library that authentically represents their unique auditory signature. Contrary to the common perception of electric vehicles as "silent," they produce a diverse array of sounds that are essential for any production. BOOM Library’s ELECTRIC VEHICLES Sound FX Collection captures the essence of these vehicles, delivering a sonic experience that is both unique and highly versatile.

This collection offers comprehensive coverage of electric vehicle sounds, including both onboard and exterior perspectives. With up to 12-channel onboard microphones, including electromagnetic microphones, the library captures the nuanced sounds from the cabin, engine bay, trunk, and bumpers. The exterior recordings feature four distinct perspectives - approach, away, cornering, and start and stops - providing a complete auditory picture of electric vehicles in motion.

The ELECTRIC VEHICLES Sound FX Collection includes sounds from a wide variety of electric vehicles, ranging from a small monowheel and scooter, an EV motorbike, and various electric cars. The extensive library features recordings of steady driving, acceleration, deceleration, reverse driving, and more, captured at different speeds and in various scenarios. Whether it's the smooth approach of a Hyundai IONIQ 5 or the dynamic start and stop manoeuvres of a Skoda Eniaq, each sound is detailed and authentic, immersing the audience in the electric vehicle experience.
