Merging Technologies returns to NAB 2023

The centennial edition of the NAB show is set to be an unmissable celebration of broadcast, media and entertainment technology. Taking place at Las Vegas Convention Center between the 15th-19th of April, Merging Technologies will be exhibiting at stand C4517.

Over the past year, the Merging Technologies team have been working on an impressive catalogue of product developments, including two plug-ins for the Music Mission (Deesser and BlackHole reverb from Eventide), 336 bands of EQ and the integration of Sonarworks SoundID Reference into the MERGING + Anubis, for seamless headphone and speaker calibration. The Merging team will be demoing this integration on the stand, which now also includes support for multichannel corrections.

“The past twelve months have been a period of growth for Merging Technologies, and with the release of further software technology alongside our Commentary, Music and Monitor Missions for Anubis, we are reaching a wider audience than ever before,” confirms Rune Jacobsen, International Sales Manager at Merging. “The team and I are looking forward to returning to NAB this year and demonstrating the capabilities of our latest product developments to clients and industry friends in the US.”

Furthermore, 2023 also brings with it the Dolby certification of Merging Technologies’ VAD premium AES67 driver. A low-cost solution for using a Mac as a dedicated Dolby Atmos Renderer workstation in an AES67 environment (Dante devices @ 48kHz, Merging Devices up to 96kHz), the driver is Dolby certified for both home entertainment and theatrical applications, tapping into a fresh market of potential end-users for Merging Technologies.

“The NAB show allows us to showcase the networking capabilities of our products and to demo them in use cases outside of the world of music,” explains Jacobsen. “We’re looking forward to a busy show!”
