

Adamson October 2026 Software Updates

Adamson releases updates for ArrayIntelligence, FletcherMachine and the USB-Milan Bridge, with new features, performance improvements and better compatibility across their systems.

ArrayIntelligence V1.4 adds support for more products and improves performance for larger system deployments. This update adds support for VGx, VGd and XG amplifiers, improves handling of network monitoring and adds more 3rd party devices to the Milan patch page.

Major updates:

- Support for VGx, VGd and XG amplifiers
- New presets for VGx, VGt, MG and XG/IS series
- Improved performance and stability for larger systems
- Improved Milan patching, including third-party devices
- Improved optimization results and handling of mixed arrays

Previewed at InfoComm 2026, FletcherMachine 2.4 introduces an updated interface, improved performance and new functionality. The update supports switching between Milan and Dante network audio formats, with MADl remaining available in both configurations. The release also includes improved colour contrast, Wake on LAN functionality, bug fixes and enhanced core protection to improve overall reliability in the field.

Major Updates:

- Updated interface with improved colour contrast
- Switchable Milan / Dante network formats with MADl support
- Wake on LAN functionality
- Bug fixes and improved core reliability

A new FletcherMachine video series is available, with more episodes being added regularly.
