Alfatron Electronics ALFC-657D

Alfatron Electronics, a manufacturer of innovative products for the AV market, introduces the Alfatron ALFC-657D full-range, 6-inch Dante ceiling speakers. Sold in pairs as one Master speaker (ALFC-657-DM) with a built-in 2 x 30W POE (Power Over Ethernet) amplifier outfitted with a 2-channel Dante Input, and one Slave speaker (ALFC-657-DS) equipped with a Phoenix input, the new ALFC-657D ceiling speakers deliver articulate sound quality and make an exceptional choice for use in distributed sound reinforcement applications.

The Alfatron ALFC-657D full-range, Dante ceiling speakers use a flush-mounted design that enables them to blend aesthetically into a wide range of environments. The Master speaker provides an amplified speaker output to drive the Slave speaker. Each pair of ALFC-657-D speakers are powered via the network POE switch. The system utilizes a 2-way, full-range loudspeaker design with a coaxial HF transducer. The 6.5-inch woofer features a moisture/water-proof composite diaphragm. A 1-inch silk dome tweeter with an adjustable angle produces rich mids, delicate highs, and an overall warm, pleasing sound. The Alfatron ALFC-657D ceiling speakers feature a wide, flat frequency response ranging from 65Hz to 20KHz and deliver very pleasing and articulate audio quality. The system has a high maximum SPL output of 111dB, enabling it to provide a commanding sound presence.

Kevin Gelman, National Sales Director, CFO at Alfatron Electronics, commented on the company’s new ALFC-657D full-range, Dante ceiling speakers, “As the latest addition to our company’s loudspeaker product line, the ALFC-657D ceiling speakers are engineered using premium-quality components and advanced acoustic design techniques to ensure superior sound quality, clarity, and coverage. This includes an aesthetically designed borderless magnetic grill for a visually pleasing appearance coupled with weather resistant materials that offer superior moisture protection for installation in humid environments. For distributed sound applications such as
