Amadeus Acoustics ART

Amadeus Acoustics, a company with expertise in cutting-edge audio technology, announces the launch of its groundbreaking Amadeus ART platform. Designed for multi-channel and multi-room applications, ART sets a new standard for dynamic, scalable, and modular audio solutions. The platform will be showcased at Integrated Systems Europe (ISE) 2025, with a special introductory offer available at booth 7H840.

The Amadeus ART platform is a versatile, software-based audio system that empowers venues of all sizes to achieve superior sound control. Its modular and scalable design enables seamless management of sound across individual spaces or multiple zones, providing precision and adaptability for any event or application. Whether hosting immersive audio experiences, managing advanced room acoustics, or delivering crystal-clear sound for corporate presentations, ART offers unparalleled versatility and performance.

"ART was created to push the boundaries of what’s possible in audio and acoustic control," says Fabio Kaiser, CEO of Amadeus Acoustics. "We’ve combined cutting-edge technology with user-friendly features to deliver a solution that adapts effortlessly to the needs of any venue. From small theaters to expansive concert halls, ART provides a tailored, high-fidelity experience."

The Amadeus ART platform is built around a comprehensive ecosystem of software, hardware, services, and content. ART allows users to activate specific functionalities based on their needs, including immersive sound, active acoustics, voice lift, and standard DSP functions. A licensing system ensures the system remains adaptable and cost-effective. With support for configurations ranging from two to 256 output channels, ART is engineered to handle even the most complex audio environments

with ease.

ART hardware solutions range from portable units (ART::Box) to compact and high-capacity, rack-mounted servers (ART::Hub 1 and ART::Hub 2), ensuring the right fit for any application. Seamless integration with third-party systems such as mixing desks, digital audio workstations (DAWs), and show control platforms via ART::Tools ensures compatibility and ease of deployment. Future updates will include AI-assisted processing and advanced auto-assist systems, such as ART::Wizard for guided setup and ART::Compose for custom audio content creation. ART::Tune and ART::Care provide comprehensive design, tuning, and ongoing support services to ensure optimal performance and long-term reliability.

ART empowers venues to adapt their acoustic environment to suit diverse events, from live concerts to corporate conferences. By enabling precise control over sound distribution and quality, ART enhances audience experiences, streamlines operations, and ensures exceptional audio fidelity in every scenario. ART grows with your needs, offering solutions for small-scale setups or large, multi-room environments. It’s fully brand agnostic, which means it works with any loudspeaker system, including what you already have installed in your venue. A modular licensing system also allows users to expand capabilities as requirements evolve, ensuring a future-proof investment.

To celebrate the launch of the ART platform, Amadeus Acoustics will offer a special introductory promotion at ISE 2025. Attendees are encouraged to visit booth 7H840 to experience live demonstrations of ART’s capabilities and learn more about this limited-time offer.

“The ART platform represents the future of audio and acoustic control, and we’re excited to share it with the global audio community at ISE 2025,” adds Kaiser. “This is an opportunity for venues to elevate their sound management capabilities and deliver unforgettable experiences to their audiences.”
