ARVA Group New HARVEY Distributor

DSPECIALISTS announces an exclusive distribution agreement with the Scandinavian ARVA Group for HARVEY products in Finland, Sweden, Denmark and Norway as well as Estonia. HARVEY is a family of high quality audio DSPs with a wide range of interfaces and control functions. The ARVA Group is a well-established group of companies in the high-end Pro Audio markets in Scandinavia and Finland, representing world-leading brands such as d&b audiotechnik and Solid State Logic across the entire pan-Nordic region. The Arva Group includes Arva Trading in Sweden (the parent company of the group, established in 1989), Alfa Audio in Denmark, Arvalyd in Norway and Arva Audio in Finland. The profile of the ARVA Group companies and the associated regional bundling of experience, commitment, market knowledge and service as well as the trade in world-leading audio products will contribute to HARVEY's successful sales in the Nordic region.

HARVEY is a freely programmable audio DSP that offers numerous control interfaces. HARVEY has been developed by DSPECIALISTS in recent years for fixed installations in theatres, churches, hotels and conference rooms. Due to the high audio quality and the extensive, constantly growing software library for audio signal processing, HARVEY is also ideally suited for use in studios. Analogue inputs and outputs as well as AES and Dante are available as audio interfaces. HARVEY also offers the customer numerous control options. In addition to TCP/IP, RS485 and RS232, GPIOs can also be freely programmed. This allows HARVEY to call up the optimal setup for every conceivable scenario and to communicate with other devices.
