

AUDAC VIRO C

AUDAC presents the VIRO C series, a new column loudspeaker platform within the VIRO family of compact premium loudspeakers, developed for spaces where architectural integration and acoustic precision must work in perfect balance. The VIRO C series is designed for conference rooms and high-end meeting spaces, premium hospitality environments, refined retail locations, luxury residential projects and yachting applications. In these spaces, visual clutter and uncontrolled sound dispersion are not an option. The VIRO C series delivers controlled, intelligible audio in a form factor that remains visually discreet and architecturally respectful.

At the heart of the series is a custom designed 1.3" driver platform. This driver technology allows the column to deliver precise and consistent sound reproduction with controlled directivity and a wide horizontal opening angle, even in acoustically complex spaces. The result is outstanding speech intelligibility and a coherent sound image that stays stable across the listening area.

The ultra slim enclosure has been developed specifically for flush mounting on- or in-walls. Invisible mounting points combined with a screwless click on grill system ensure a clean visual result without exposed hardware. The grill fixation system avoids the use of magnets to prevent long term dust accumulation and uses a dedicated puller tool that operates through the acoustic cloth.

Installation efficiency and reliability were central to the design. The VIRO C series features SnapConnect connection for fast and safe cabling, with discrete cable entry

from the bottom rear and integrated guiding clips. A built-in protection circuit and ThermalPath driver protection system guard the drivers against overload and thermal stress. Cooling is handled through an integrated dedicated heatsink design that dissipates heat through the rear of the cabinet and the outer chassis, ensuring stable performance even in demanding conditions.

Available models:

- VIRO C201: 2x 1.3" drivers - 20W RMS / 40W program - 8 ohm - black or white
- VIRO C801: 8x 1.3" drivers - 80W RMS / 160W program - 8 or 32 ohm - black or white
- VIRO C1601: 16x 1.3" drivers - 160W RMS / 320W program - 4 or 16 ohm - black or white

Perfectly paired with the ARCHI series architectural subwoofers, the VIRO C series offers a complete solution for premium spaces.
