AUDAC VEXO206

AUDAC announces the launch of the VEXO206, the latest member of its performance loudspeaker solutions, making its official world debut at InfoComm Asia, booth L16. Designed for applications where audio clarity, compact form, and sleek aesthetics are essential, the VEXO206 delivers an unmatched balance between size and output.

With a 2.5-way loudspeaker design, the VEXO206 incorporates dual 6.5” coaxial low-frequency drivers and a 1” compression driver, producing a rich, full-bodied sound with 250W AES continuous power handling and a maximum SPL of 119dB. Its extended frequency response from 69Hz to 20kHz (±3dB) ensures articulate vocal projection and immersive music playback in any setting.

Housed in a 15 mm polyurea-coated plywood cabinet, the VEXO206 blends durability with elegance, making it the ideal choice for hospitality venues, sports facilities, nightclubs, and modern commercial environments. The enclosure includes a custom U-bracket for both vertical and horizontal mounting, enabling seamless integration in various setups. With a 90° x 110° coverage pattern, it ensures wide and even sound dispersion. What sets the VEXO206 apart is its position between the VEXO106 and the VEXO208I - offering a compact footprint with a performance leap. As a 2.5-way configuration, it bridges the gap with clarity and detail that rivals much larger systems. Furthermore, integrators can opt for a 70/100V transformer module for distributed audio system compatibility.

Experience the VEXO206 at Booth L16 during InfoComm Asia in Bangkok. Get hands-on with AUDAC’s latest innovations and see how this compact loudspeaker can transform your audio setup. AUDAC is hosting a reaveal moment on wednesday, 23
