Bluesound Professional B240Q & B240M

Bluesound Professional, a company with expertise in professional audio streaming, is expanding its amplifier portfolio with the new B240Q Network Streaming Multichannel Amplifier, an all-in-one solution designed to simplify distributed audio in commercial environments. The B240Q, alongside the new B240M amplifier, will be on show at InfoComm 2026.

Featuring two BluOS zones and four channels of amplification, the B240Q combines music streaming, digital-to-analog conversion, and flexible speaker connectivity within a single, compact platform. Powered via variable input PoE network connections, it delivers both power and network connectivity over Ethernet, vastly reducing installation complexity whilst enabling more flexible device placement.

With support for low impedance and constant voltage (70V/100V) speaker systems, the B240Q is well suited to large, multi-zone deployments across retail, hospitality and corporate environments. Its decentralized architecture allows the amplifier to be positioned closer to speakers, reducing cable runs while maintaining centralized control via BluOS. Bluesound Professional will also showcase the new B240M amplifier, which builds on the already feature-rich B240Q platform by adding Moodsonic generative biophilic soundscaping capabilities.

Visit Bluesound Professional at Booth N6431 in North Hall at InfoComm 2026 to learn more and discover the latest innovations in networked audio solutions.
