Bosch CCS 1000 Digital Discussion

The new Bosch CCS 1000 Digital Discussion device is minimalist yet powerful in functionality and now even smaller in size. Taking 25 % less space is the right choice for everyday decision-making venues where simplicity and performance are critical. The new design is the latest addition to the CCS 1000 D family and will seamlessly integrate with other members of the family.

The robust CCS 1000 D features a high-quality finish, contemporary materials, and a premium look, offering a fresh design to modern meeting spaces while ensuring technically flawless conversations. Its slim form and ergonomic design leave more space on the table for supporting meeting tools, making this newly added design to the CCS 1000 D the perfect solution for small to medium-sized venues such as city councils, town halls, courtrooms, ministries, boardrooms, and congress hotels.

Designed for crystal-clear dialogue, the CCS 1000 D is available in long or short microphone models. It features the best-in-class audio with Digital Acoustic Feedback Suppression, superior microphones, and integrated loudspeakers for enhanced speech intelligibility. The slimmer form factor improves microphone reach and makes digital meetings feel more natural. The patented possible-to-speak indicator further enhances the conversational flow by using LED indicators to help participants understand when they can speak.

Supporting and enhancing this natural meeting feeling, the CCS 1000 D brings an authentic face-to-face experience. This is achieved by allowing the loudspeaker and the microphone to be on simultaneously, encouraging participants to take part in discussions more freely. Every detail of the new CCS 1000 D Discussion Devices reflects a thoughtful balance between simplicity and precision. The modular single- or dual-button configuration means that the same device can function as either a chairperson or participant device.

True to its impressive legacy, the new device has also been designed for a plug-and-play ultra-fast setup and configuration. Discussion Devices are connected directly to

the Control Unit in a daisy-chain configuration. They can then be connected to or removed from the system as required, without the need to power down or restart the system. Enhancing the long-term value of CCS 1000 D, the refreshed device integrates flawlessly with existing systems. This extends the lifecycle of existing systems, ensuring that all functionality is preserved as part of a stylish expansion without disruption or altering system performance.

Participants will be delighted by the usability and audio quality they receive, while integrators and technicians will enjoy the plug-and-play functionality and simplicity of the solution. Overall, the new design introduces a modern aesthetic that will support any meeting space, empowering focused discussions with confidence. The new CCS 1000 D will be officialy launched at ISE 2026, Hall 3, Stand 3B300, and is expected to be ready to ship in Q1 2026.
