

Harrison Audio LiveTrax 3

Legendary console manufacturer and software developer Harrison Audio announces that it will showcase LiveTrax 3, the latest version of its renowned live performance and virtual soundcheck software, at the NAMM 2026 Show. The new software version will be demonstrated on a DiGiCo Q112 live console at the DiGiCo [Booth 17501] during exhibition hours, between January 22 and 24.

Created specifically for live sound engineers, Harrison LiveTrax is a convenient and cost-effective multitrack recording and virtual sound check software solution designed to seamlessly interface with DiGiCo, Allen & Heath, and SSL Live console systems. This best-in-class software is perfectly suited to capture live performances of any kind - whether it is a small weekend show or a large-scale, multi-stage production with hundreds of tracks.

Among the new updates in LiveTrax 3 is a new session creation feature - exclusive to DiGiGo, as well as the ability to seamlessly transfer console channel names to LiveTrax tracks. The new software also features capabilities including automated marker insertion when a snapshot is fired, macro control of LiveTrax Transport, intelligent recall of audio routing settings, automatic session creation based on the console configuration (DiGiCoexclusive), dynamic meter bar scaling based on audio interface configuration up to 512 inputs, provides a stereo mix while recording for streaming applications and much more.

"We designed LiveTrax from the ground up to be a highly stable, multi-track

software solution for live sound," said Gary Thielmann, president of Harrison Audio. "With the addition of DiGiCo compatibility, LiveTrax 3 is now trusted among the industry's top console manufacturers, and we have developed its simple - yet powerful - interface even further so it can capture performances in even the most demanding situations."

Visit the DiGiCo booth during NAMM 2026 to experience how LiveTrax 3 delivers the accuracy and reliability needed to capture every show without compromise. Whether it is the new session creation feature, or its powerful new marker capabilities for capturing performance snapshots, LiveTrax 3 software is the perfect complement to a DiGiCo, SSL or Harrison live console setup. During a virtual soundcheck, users can recall specific mixer scenes, synchronize tracks names, and follow transport commands directly from the console. The software's seamless integration with DiGiCo, Harrison and SSL live consoles also eliminates the many unnecessary features of a fully featured DAW in a live sound environment, enabling the user to capture any live performance without complication. Livetrax will be available March 2026 from the website below. Visit DiGiCo at the NAMM Show 2026 [Booth 17501] to experience LiveTrax 3 first-hand, in a powerful DiGiCo-based live console environment.
