HK Audio at NAMM 2026

HK Audio is giving visitors to The NAMM Show 2026 the opportunity to experience the quality and power of its loudspeakers for themselves in its dedicated demo room. The HK Audio demo room has been created in partnership with US distributor KMC Music and is located in ACC North level 2 #18812 at the Anaheim Convention Center. Demos will run regularly every day from January 22-24.

HK Audio has had a presence at The NAMM Show for many years, but it has not had a demo space where it could show the true capabilities of its solutions. The 2026 event changes this and gives visitors the opportunity to understand why HK Audio systems are a popular choice on stages all over the world. The demo room will give visitors the chance to hear everything from the award-winning POLAR 12 MK2 column systems to the larger LINEAR 5 MK2 and LINEAR 9 scalable solutions.

“We know how important it is for people to actually hear what HK Audio loudspeakers, with a 35-year provenance, are capable of,” said Sean Martin, International Sales Manager – The Americas at HK Audio. “With our dedicated demo room, we’ll be taking visitors through a range of solutions that help to enhance every performance. We have carefully selected these solutions because they all have unique qualities and capabilities that other brands can’t offer. We know these solutions will help to solve many of the problems that professionals across the Americas face every day, and we are eager for as many people as possible to hear them in action.”

Another highlight of the demo space will be the opportunity to experience the new filter templates for ASHLY AquaControl and FX Control. The recently announced templates allow users to benefit from optimized sound tuning, greater operational reliability, and significantly reduced setup effort for live applications. To experience HK Audio in action, head to demo room 18812 in ACC North level 2 at the Anaheim Convention Center from January 22-24.
