HK Audio at ISE 2026

HK Audio will bring its range of high-quality audio solutions to ISE 2026 as it looks to highlight how HK Audio loudspeakers can deliver pristine sound for every project. This will see visitors to booth 7A190 presented with equipment for everything from live sound to PA/VA and audio networking. The German manufacturer will show its full range of install and concert sound products at the event. This includes COSMO and CONTOUR X for live events and FINEO, SI SERIES and VORTIS 2 for installation. Alongside this, the brand will also demonstrate the professional audio industry's largest range of MILAN-certified products to highlight the benefits of the technology for deterministic, interoperable audio networks.

"ISE is the biggest show of the year for the professional AV industry with visitors from every territory and every sector, so we know how important it is to highlight the broad range of solutions our loudspeakers cater to," said Christian Jordan, CSO and CMO at HK Audio. "Our presence at ISE 2026 will show how we can meet the needs of as many visitors as possible. Whether its systems integrators looking for networked audio, stadiums looking to enhance the fan experience, hotels looking for a discreet installed solution or rental companies looking for a powerful concert sound system, we have the right options for all of them, and we will be welcoming them to our booth to learn more."

ISE 2026 runs from February 3-6 2026 at Fira Barcelona Gran Via. HK Audio's international team of product specialists will be on hand on booth 7A190 at the front of Hall 7 to take visitors through the company's technology and discus how these solutions can fit with real-world project requirements.
