HK Audio POLAR MK2

With the new POLAR MK2 series, HK Audio presents a column PA system that takes sound quality, versatility and design to a new level. Developed for DJs, musicians, event managers and business users, POLAR MK2 delivers impressive performance in a well-designed, mobile format. Modern technology, intuitive operation and uncompromising functionality make it the ideal all-in-one solution for stage, event and presentation applications.

The POLAR MK2 series is the logical evolution of one of the world's most successful column PA systems. Crystal-clear, distortion-free sound, powerful bass and innovative features are combined with elegant design and maximum flexibility. Whether for small stages, mobile DJ performances or high-quality business presentations, POLAR MK2 delivers professional audio quality in every situation.

Available in two versions – POLAR 10 MK2 and POLAR 12 MK2 – the system can be individually adapted to the user's needs. POLAR 10 MK2 already offers everything

you could want from a column PA system. POLAR 12 MK2 is the perfect solution for DJs who rely on powerful, deep sound in continuous use. If you still need more punch in the bass range, all POLAR systems can be expanded with additional subwoofers from the HK Audio SONAR series (SONAR 115 Sub D).

The low-resonance column made of high-quality aluminium contains six 3‘ neodymium midrange drivers and a 1’ tweeter with a constant directivity horn. The POLAR MK2 achieves an exceptionally wide 120° dispersion and offers detailed, distortion-free sound reproduction – ideal for speech and music in any room size. The deep subwoofer in a robust wooden enclosure delivers dry, precise bass – without any artificial filters. Despite its power, it remains pleasantly compact, easy to transport and, with ergonomic handles and an optional rolling board, ideally equipped for mobile use.

The minimalist, modern design of the POLAR MK2 blends seamlessly into any environment. The systems are also available in elegant white – perfect for weddings, galas and high-end business events. For use in low-ceilinged rooms or as monitors, the systems can be used flexibly without spacers. The integrated mixer offers maximum connection flexibility: two mic/line channels with gain control, a high-impedance instrument input (Hi-Z) and an AUX/Bluetooth channel cover all common sources. Switchable phantom power also allows the use of professional condenser microphones to fully exploit the sound potential.

Three selectable sound modes – Music, Voice, DJ – and five storable user presets allow optimal adaptation to the room and application. In addition, a master EQ, system delay and limiter ensure professional sound optimisation in every situation. Thanks to Bluetooth 5.0 with True Wireless Stereo, music signals can be streamed wirelessly in the highest quality. Two POLAR MK2 systems can be paired wirelessly to deliver true stereo sound – without the need for additional cables or mixing consoles. The integrated USB-C charging port keeps smartphones, tablets or wireless microphone systems reliably powered even during long events – ideal for professional use without separate power supplies or free power sockets.

The newly developed HK Audio Connector ensures a stable, mechanically secure connection between the subwoofer and column – without external cables. The system can be set up in no time and is ready for use. The scope of delivery includes a padded carrying bag for the column elements and a robust protective cover for the subwoofer. This ensures that the POLAR MK2 is well protected on the road – mobile, durable and ready for use.

With the POLAR MK2 series, HK Audio delivers a professional complete solution for
