HK Audio POLAR 8 MK2

With the new POLAR 8 MK2, HK Audio is expanding the successful POLAR MK2 series with its most compact model to date. The powerful all-in-one column system combines impressive sound quality, modern technology and maximum user-friendliness in a particularly portable format. Whether on small stages, in rehearsal rooms, at conferences or at events, the POLAR 8 MK2 stands out as a versatile solution for professional sound reinforcement requirements. For sophisticated design concepts, such as at weddings or corporate events, the system is also available in an elegant white finish.

Inside the column element, six 2.5-inch neodymium midrange drivers operate in a specially developed Curved Column arrangement. This innovative design ensures even sound distribution with wide dispersion angles of 120° horizontally and 45° vertically. The result is clear and uniform sound coverage even in acoustically challenging environments, low-ceilinged rooms or with an audience positioned in various locations. Speech intelligibility and sound quality remain at the highest level even at close range.

The integrated 8" subwoofer delivers impressive and precise bass performance. Its metal-reinforced, low-resonance plastic enclosure minimises unwanted vibrations

and ensures a tight, controlled low-frequency response – ideal for music, presentations and DJ applications. An integrated 1,200-watt Class D amplifier ensures maximum dynamics. It offers high power reserves combined with low weight and high energy efficiency. As a result, the POLAR 8 MK2 guarantees distortion-free and balanced sound reproduction even at high volumes.

A particular highlight is the newly developed Contour control. This allows for seamless adjustment of the sound between the DJ, Music and Voice presets. Unlike fixed presets, the continuous control enables precise tuning – from crystal-clear speech reproduction to powerful DJ sounds. This allows the system to be optimally adapted to any application and individual sound preferences. An integrated 24-bit DSP ensures precise digital signal processing and exceptional sound fidelity. This technology is complemented by a multiband limiter that intervenes specifically only in critical frequency ranges. As a result, the overall sound remains stable, balanced and natural even at maximum volume, without audible distortion or pumping effects.

The POLAR 8 MK2 features an integrated 3-channel mixer with two mic/line inputs and an aux/Bluetooth channel. Microphones, instruments, DJ equipment or external audio sources can be connected directly, meaning that in many applications, no external mixer is required. Thanks to Bluetooth 5 audio streaming, the system provides a stable, high-quality wireless connection. Using True Wireless Stereo (TWS), two POLAR 8 MK2 units can be paired wirelessly and operated as a true stereo setup without any additional cables.

In addition to its sound performance, the POLAR 8 MK2 impresses with its high practicality for everyday use. A carry bag for the column elements and a transport case for the subwoofer are included as part of the package. The system is quick to set up, easy to transport and ideally suited for mobile use. With the POLAR 8 MK2, HK Audio is setting new standards in the compact column speaker class. The combination of precise sound distribution, powerful bass, intelligent DSP technology and intuitive operation offers maximum performance with minimum effort. As the most compact addition to the POLAR MK2 series, it is the ideal solution for professional users who value first-class sound, flexibility and mobility.
