

### KLOTZ CP7ERER1P

The new CP7ERER1P from KLOTZ AIS is a highly flexible yet extremely robust CAT7 patch cable, designed to ensure reliable signal transmission in demanding outdoor and live environments.

Equipped with the Neutrik etherCON TOP IP65 CAT6A RJ45 connector (NE8MXR-B-TOP), the CP7ERER1P can be flexibly configured for both standard RJ45 and etherCON connections by simply sliding back the etherCON housing. This makes the professional CAT7 network cable suitable for use as either an etherCON or standard RJ45 cable, ensuring reliable signal transmission even in different patch panel and network environments under harsh live conditions. Thanks to its abrasion-resistant, chemically resistant, and low-temperature flexible PUR outer jacket (down to -40 °C), the cable is ideally suited for professional touring and event applications.

The CP7ERER1P supports analog and digital signal transmission up to 600 MHz and complies with Category 7 according to ISO/IEC 61156-6. It is suitable for bandwidths up to 10 Gbit/s and applications of Classes D, E, EA, and F - including 10Base-T, 100Base-T, 1000Base-T, 10GBase-T, Token Ring, FDDI, ISDN, ATM, as well as audio and lighting networks such as Ethersound and DMX control systems.

The CP7ERER1P from KLOTZ AIS is available in a wide range of practical lengths and can therefore be used both as a compact patch cable and as a standard connection cable.

## **KLOTZ releases the versatile CAT7 Network Cable CP7ERER1P**
