

Mackie Thump

Mackie, a producer of high-quality professional audio products, today announces a complete refresh and expansion of its acclaimed Thump Loudspeaker Series, including updates to the standard Thump and the all-new ThumpXT Loudspeakers. Built with Mackie's legendary sound, the new models live alongside the popular Thump GO series making this the biggest lineup in the history of the series, featuring enhanced drivers, wireless options, and greater optimization.

"Since its debut, the Thump Series has been a staple of the gigging-DJ's toolkit everywhere, but that doesn't mean the Mackie team isn't always finding room for improvement." said Matt Redmon, Director of Product Marketing at Mackie. "We've re-designed Thump from the ground up, giving musicians and venues the best in both quality and experience. This is honestly the most powerful, best-sounding and fullest featured generation of Thump that Mackie has ever produced."

Redesigned from the ground up, the all-new loudspeakers maintain the Built-Like-A-Tank construction and versatile I/O of the popular Thump Series loudspeakers plus some powerful upgrades. The 1400W ultra-efficient Class D amplifiers provide ample headroom for even the most demanding performances allowing vocals, instruments, and music to cut through loud outdoor venues or indoor crowds with up to 128dB and 47Hz - 20kHz for optimal clarity.

Available in Thump and ThumpXT options, both offer a built-in Feedback Eliminator in addition to a convenient Music Ducking Mode. The new ThumpXT tacks on extra capabilities with venue-specific voicing modes and supplementary controls via the Thump Connect 2 App. Access system EQ, levels, mutes, Voicing Modes, and more, then link the speakers together with Bluetooth wireless streaming.

Mackie Announces Redesign of Renowned Thump Loudspeaker Series

Monday, 08 August 2022 18:27

For easy connectivity and input flexibility the Thump Series utilizes dual TRS/XLR inputs, and a stereo 1/8" aux input ensures that users can plug in gear without extra cables and adapters. Add the new Thump Series subwoofers (Thump115S and Thump118S) with 33Hz - 200Hz frequency response and up to 133dB to your system for extra rumble. As the most compact Thump Series subwoofer ever, the ergonomic Thump115S simplifies transport without sacrificing power.
