Martin Audio TORUS at GOYA

GOYA is a premier lounge and nightclub in Goa’s tourist hotspot of Vagator Beach. The venue blends high-energy entertainment with a luxurious atmosphere, offering a space where music, lighting, and ambiance converge to create a dynamic, immersive interior. With a reputation for hosting top-tier DJs and live performances, GOYA sets the benchmark for sound and experience-driven nightlife in the region.

The venue required an audio solution that could match this vibrant energy while maintaining pristine sound quality across different areas of the club. The client, Mr. Rajan envisioned a system that would elevate the experience for DJs and live performers, embracing deep bass, clear mids and detailed highs. With the need for seamless integration between dance areas and lounge spaces, the sound system had to be powerful yet precise, preventing audio spill, while maintaining an immersive feel. The installation team at Chopra Designs focused on delivering uniform, high-fidelity coverage to every corner of the venue to enhance both live performances and playback experiences.

To achieve this, the venue’s main area was fitted with Martin Audio state-of-the-art TORUS T1215, 12” passive constant curvature array loudspeaker, complemented with Martin Audio’s CDD15B and CDD12B coaxial differential dispersion on-wall

speakers. Powering the entire setup was the Martin Audio iK42, a four-channel 20,000W Class D amplifier, along with the DX 0.6 2-in/6-out dedicated system controller for optimised sound processing. For additional reinforcement, compatible subwoofers were installed to provide depth.

With this advanced blend of technology, the new sound system elevates the venue's reputation as a premier nightlife destination in Goa. The installation has not only met but exceeded the client’s expectations, setting a new standard for sound reinforcement in the region. “The transformation in our venue’s sound is incredible,” said Mr. Rajan. “From the dance floor to the lounge, the clarity and impact are unmatched. The new system has elevated the entire club experience, and the response from our guests has been overwhelmingly positive." “The installation at GOYA perfectly balances power and precision, creating an immersive sound experience throughout the venue,” added Abhimanyu Chopra, Sound Consultant, Chopra Designs. “The system delivers exceptional clarity and impact, ensuring that every performance sounds exactly as intended."

The Martin Audio components were supplied by the company’s distribution partner, VMT Enterprise, whose Pre-Design & Sales Engineer, Sai Prem, concluded, “The system delivers an outstanding combination of clarity and power, ensuring an immersive experience throughout the venue. Every element has been fine-tuned to provide a balanced and dynamic sound that enhances both live performances and DJ sets."
