Two-Day Martin Audio US Training Programme

Martin Audio US has set two training days to ensure system users and designers are properly equipped to get the best outcome from their implementations. They will learn how to achieve full optimisation, control and monitoring of performance on a variety of Martin Audio systems. The two-day programme will take place on March 13-14 at Frost Productions, 6 Empire Blvd, Moonachie, NJ 07074 and the trainer will be Product Support Engineer, Joe Lima.

Day 1 will examine in depth Martin Audio's proprietary software platforms, Display 2, Display 3 and Vu-Net. The following day will see attendees explore the MLA Mini, in groundstack and flown configurations, before diving into networking and connectivity, and concluding with an XE system overview.

Joe Lima comments, "As the demand for Martin Audio products continues to increase in the US market, training on systems like DISPLAY and VU-NET is not just beneficial but vital. With our products gaining significant traction and recognition within the marketplace, ensuring that professionals are well-versed in the intricacies of our software is paramount."
