Martin Audio WPC for Superhouse Paskal Bandung

Holywings is an Indonesian lifestyle and entertainment group with an eclectic selection of bars, clubs and live music venues, spread across the island’s key cities. Many of the venues under the Holywings banner feature Martin Audio solutions, provided and installed by partner, GMT Group.

Their latest sound system upgrade - at the HW Superhouse Paskal Bandung live music bar - is no exception, although in this instance it is a new-generation Martin Audio WPC line array that provides the main stage hangs rather than the point source that populates many of the other venues. The system was conceived by the Marketing & Technical Director of GMT Group, Satrio Prisetya.

Superhouse Paskal Bandung itself is a large, near 400-capacity, open-plan venue with its stage set centrally. The venue offers combines live band performances with DJ sets, to create a true club atmosphere. Working with PT.Goshen Swara Indonesia, Martin Audio’s Indonesian distributor, GMT Group recommended this solution based

on all performance requirements.

As a result, four WPC elements per side are paired with two SXH218 subwoofers per side in stereo stacks. These are supported by a pair of X15B outfills and four TORUS T1230 for delay, with a further pair each of SX218 and X118B subs for delay. If this type of powerful, dynamic audio setup was required to support both DJ-based and live events, then this was matched by the dramatic lighting, stylish industrial interiors, and a spacious layout to deliver the full club experience. The feedback from the customer could scarcely have been more positive. The HW Superhouse Paskal Bandung AVL team said, “We just wanted the sound to reach every corner evenly - and now it does.”
