

Mixed In Key 11

Mixed In Key, the go-to key detection software for DJs and producers worldwide, is excited to announce the release of Mixed In Key 11. For years, Mixed In Key has been trusted by the top artists in the industry, including David Guetta, Kaskade, Armin van Buuren, Alesso, Lil Jon, Nicole Moudaber and many others. With version 11, we're building on that trust by introducing new features that give DJs even more control over their music library, keeping their workflow fast and efficient.

What's New in Mixed In Key 11:

- **Advanced Filtering:** Easily sort tracks by key, tempo, energy level, and genre to find the perfect tunes for any mood or gig.
- **Nested Playlists:** Organize your tracks like a pro by creating playlists within playlists—perfect for managing different genres and moods.
- **Snap Cue Button:** This new invention allows you to adjust cues and skip the

boring parts of tracks. It brings the closest cue-point to your current time marker like a magnet.

- **Manual Reordering:** Fine-tune your playlists by manually arranging songs, giving you total control.
- **Modern User Interface:** The updated UI makes navigation easier and more intuitive.
- **Expandable Camelot Wheel:** Collapse it to free up space for folder and playlist management or expand it when needed.
- **Additional Audio Player:** A new player in the Tags Editor tab lets you listen and organize tracks as you clean up and edit tags.
- **New Song Info Panel:** Quickly edit song details like title, artist, album, key, tempo, and more using a sleek slide-in interface.
- **Emoji Support:** Add emoji labels to playlists for quick identification at a glance.
- **Extra Tagging Options:** Tag key, energy level, and BPM all at once, ensuring seamless integration with your DJ software.
- **Standard Notation:** View tracks in standard notation, alongside Camelot, Flats, and Sharps for more flexibility in organizing your tracks.
- **New Editable Columns:** We've expanded the list of editable columns to include Label, Remix, Composer, and more. These details will carry over to your DJ software if supported.

"We spent 3 years thinking of how to make Mixed In Key more user-friendly and helpful to DJs and producers. This is the result. We listened to what our community needed and packed it with features that make DJing and music prep even more fun and intuitive. This update is for everyone who loves to DJ and produce music." - Yakov, Creator and President of Mixed In Key
