# Steinberg MixKey

Steinberg has today announced the immediate availability of MixKey, a powerful audio mixer that provides a set of versatile tools tailored to meet the demands of discerning streamers, podcasters, and creators.

MixKey is a professional audio mixing application, designed for live streaming and including a comprehensive range of features to cover every need. Using MixKey with a streaming setup ensures high-quality audio, its built-in low-cut filter helping to deliver pristine speech every time. A customizable interface allows users to change channel colors, names and make easy volume level adjustments. Added channels are monitored through headphones and, by switching to the Cue feature, users can listen to individual sources. Auto-leveling capabilities, recording the entire streaming mix, multi-source input, and panic buttons for muting either the microphone or the entire audio output round out the impressive feature set.

Head of Strategic Business Development, Stefan Schreiber, comments: "These are exciting times for Steinberg, as we bring many years of audio software development to the streaming market. In collaboration with Yamaha, we are elated to introduce MixKey which offers streamers a reliable audio mixer with many excellent features."

MixKey is being showcased publicly for the first time at TwitchCon, taking place at San Diego Convention Center in the US from October 17–19. Show attendees can experience MixKey in action at the Yamaha booth #3425. Available in public beta,

MixKey can be downloaded from the Steinberg website.

Features:

- Channels: Add multiple channels, select each individually, change the color, name, and volume level.
- Monitoring: Monitor any channel directly through headphones.
- Cue: Listen directly to a channel's source signal in headphones, isolated from the full mix.
- Monitor Level Link: Link the monitor and stream levels, so they exactly match what the audience hears.
- Extra Voice Chat Output: Use this channel as a dedicated voice chat feed for apps like Discord or Zoom.
- Sensitivity: Easily control the input level with the slider or enable Auto to let MixKey handle it.
- Sound Refinement: Ensure clear, professional speech in every stream with the built-in low-cut filter.
- Recording: Capture high-quality recordings of the entire audio stream with ease.
- Panic Buttons: Quickly mute either the microphone or the entire audio output with a single click.
- Stream Level: Control how loud each source is in the stream with an intuitive volume slider.
