New Audio-Technica & Extron Enterprise Solutions

Extron and Audio-Technica announce that their popular Design Solutions devices, Certified for Microsoft Teams, now include the ATND1061 Beamforming Ceiling Array Microphone and Engineered Sound wireless microphones from Audio-Technica. Extron has worked with Audio-Technica and Microsoft to deliver the technology needed for a robust Microsoft Teams meeting experience in larger spaces. With AI tools like Microsoft 365 Copilot enhancing workplace collaboration, clear audio is essential for accurate transcription and analysis. The Audio-Technica ATND1061 microphone ensures every participant is clearly heard throughout the room, promoting more effective meetings.

“Extron is a global leader in AV commercial and education control systems. Audio-Technica is proud to offer these versatile certified room solutions to integrators. We recognise that each collaboration space presents unique challenges. Together with Extron's DTP3 Crosspoint, the ATND1061 and Engineered Sound Wireless systems aim to simplify deployment through flexibility, while offering secure, reliable, high-quality sound,” said Matt Markgraf, Audio-Technica Global Strategic Partnerships and Alliance Manager. “Our international collaboration with Audio-Technica and Microsoft delivers high performance Certified for Microsoft Teams conferencing solutions,” says Casey Hall, Chief Marketing Officer for Extron. “These solutions offer outstanding voice intelligibility to users and installation flexibility to integrators.”

“Meeting rooms deserve great audio not only for the meeting participants, but also to capture all the content generated in those rooms,” said Albert Kooiman, General Manager, Teams Partner and Customer Enablement at Microsoft. “By providing
