

# Bluesound PULSE SUB

Bluesound will give CEDIA Expo 2026 attendees the first opportunity to experience the new PULSE SUB. The completely redesigned wireless subwoofer is designed to work with the PULSE CINEMA and PULSE CINEMA MINI wireless soundbars, and bring deeper, more dynamic bass to movies, music, TV, and gaming, while offering the flexibility to set it up virtually anywhere.

Combining a distinctive cylindrical form factor with a powerful 350W amplifier and dual-opposing 6.5-inch woofers, the PULSE SUB delivers deep, detailed bass while minimising unwanted vibration for clean and controlled low-frequency performance. With integrated cable management and a compact footprint that sits at just over one square foot of floor space, the PULSE SUB is a modern solution for living spaces where performance and design are both important.

Designed to go with the PULSE CINEMA and PULSE CINEMA MINI, as well as compatible Bluesound Players including the POWERNODE, PULSE M, and PULSE FLEX, the PULSE SUB connects wirelessly through BluOS for streamlined setup and reducing cabling requirements. Integrators can easily configure volume, crossover, and phase settings through the BluOS Controller app, while a line-level analogue input provides added flexibility for wired connections.

At CEDIA Expo 2026, the PULSE SUB will be showcased as part of a complete 5.1 wireless home theater system featuring the new PULSE CINEMA soundbar and PULSE FLEX wireless speakers. Visitors will have the opportunity to demo the new
