

Austrian Audio OD303

Maximum Performance at an attractive Price

Austrian Audio announces the OD303, a new dynamic vocal microphone that allows singers and performers to get Austrian Audio quality at an affordable price. The OD303 focuses on what's important: the best possible sound for your vocal performance. It is well-balanced and open, but at the same time its powerful sound is unparalleled in this price range.

With its rugged construction, the OD303 will withstand daily use in the rehearsal room and also the wear and tear of the road. The die-cast housing is virtually indestructible and the microphone fits comfortably in the hand.

The OD303 also incorporates the legendary Open Acoustic technology of Austrian Audio which delivers an optimally-shaped supercardioid polar pattern across a wide frequency band and with excellent feedback stability.

Sound engineers will greatly appreciate minimum changes in the sound and without increased feedback: Due to the open design, there are only minimal changes in sound and feedback behavior when holding the mic close to the head grille. In addition, the proprietary 3D Pop Noise Diffuser, developed by Austrian Audio,

New OD303 Dynamic Vocal Mic from Austrian Audio

reduces noise caused by explosive sounds such as "T" and "P".

The OD303 is a great option for artists who want Austrian Audio quality sound without breaking the bank.
