NEXO L15-I, L18-I & L20-I

NEXO has expanded its industry-standard P+ Series point source loudspeaker range with three new sub-bass speakers, the L15-I, L18-I and L20-I. Developed specifically for permanent installations, the new models are a development of the existing touring versions, and feature fabric-covered front grilles and quick-connect push connectors with IP cover protection. Available in black, white or custom RAL colours, cabinets feature threaded inserts on the back and both sides for use with a comprehensive range of mounting hardware.

L15-I, L18-I and L20-I subs feature single 15-inch, 18-inch and 20-inch long-excursion neodymium drivers, extending the LF response of a P+ Series installation down to 40Hz, 32Hz and 28Hz respectively. At the same time, NEXO has announced a new V3.1 release of its NeMo remote control app for a group of NXAMP and NXAMPMk2 Powered TD-Controllers, now delivering the same powerful control, monitoring, logging and alerting functions for Windows and macOS. NeMo v2.4 remains available for iOS.

Also new from NEXO, new firmware LOAD5_28 for NXAMP and NXAMPMk2 Powered TD-Controllers delivers uprated performance for NEXO GEO M12 line array systems including an additional +4 dB gain and more presence in the vocal range. Developed in consultation with leading monitor engineers, updated pre-sets for NEXO P15 wedge monitor setups are also included. NeMo V3.1 and firmware LOAD5_28 are available to download free from the NEXO website, where full details of the new L15-I, L18-I and L20-I can also be found.
