

Tascam RX-BT10

Tascam has announced the new RX-BT10, a professional Bluetooth receiver that allows audio from Bluetooth devices such as smartphones and tablets to be easily integrated into existing sound systems. With its rugged design and balanced XLR outputs, the RX-BT10 can be easily connected to mixing consoles or power amplifiers in virtually any mobile or installed sound reinforcement system.

Support for Bluetooth 5.1 (Class 1) is one of the key features of the RX-BT10. It enables stable connections over long distances of up to 100 metres. Ideal when installing the unit in a utility room, both the antenna and the Bluetooth pairing button can be extended to be placed in a convenient location. And for clear identification in environments with multiple RX-BT10 units, each device has its own unique ID and can be renamed by iOS, iPadOS and Android devices.

Professional Stereo Bluetooth Receiver from Tascam

Tuesday, 22 April 2025 11:08

The RX-BT10's output options include balanced XLR connectors as well as unbalanced RCA jacks. There's also a stereo/mono switch for preserving the stereo field of the source material or for mono summing, if desired. The receiver's compact design makes it easy to place in virtually any location. It includes mounting points for versatile installation and a bracket kit for shelf or under-desk mounting. Tascam also offers the optional AK-RS1, a kit for mounting two units side by side in a rack.
