

PunQtum Q310 Wall / Desktop Panel

PunQtum, a manufacturer of professional communication systems, is debuting the newest addition to its portfolio, the Q310 Wall / Desktop Panel. The Q310 is a 2-channel intercom outstation designed to be installed in any kind of venue or facility that stages live events and integrates flawlessly into an existing PunQtum portfolio. The intuitive and user-friendly design ensures effortless setup and operation. Whether wall-mounted for permanent setups or used as a portable desktop device with its extendable feet, the Q310 delivers the flexibility required for theater productions, live events, broadcast operations, and event management.

Innovative features such as daisy chaining several devices via PoE, programmable buttons for paging announcements, microphone mute and individual volume controls, allow users to tailor their communication experience to meet real-time demands. Equipped with a built-in loudspeaker, microphone and headset connectors, the new Wall / Desktop Panel serves a diverse range of applications.

It is powered via a PoE switch or PunQtum's own speaker station, and includes GPIO for event-driven actions, such as cueing lights or making remote announcements. The Q310 brings clear, reliable communication and integrated automation to any professional workflow. Attendees of this year's InfoComm are invited to join the PunQtum team at the Riedel stand #4947 to learn more about the Q310 Wall / Desktop Panel. Explore what makes it a reliable choice for any professional live event, production and broadcasting environment.
