

PunQtum Q310 Wall/Desk Mount Station

PunQtum, a brand of professional communication solutions developed by Riedel Communications, is returning to Barcelona this February to showcase its innovative range of IP-based communication tools. Among the featured products will be the new Q310 Wall/Desk Mount Station, making its ISE debut. The team will be on hand at Riedel Communications' stand 5E100 to discuss their cutting-edge solutions, including the intuitive new PunQtum Q310 wall / desk station – a versatile 2-channel communication system designed for seamless team collaboration and efficiency. Wall-mounted for a fixed setup or used as a desktop device for portable applications, the Q310 can adapt to the needs of theatre, live productions, broadcast environments and event management.

Programmable buttons allow users to customise their experience to meet real-time demands, whether that be making paging announcements or muting microphones, while the individual volume controls for each channel ensure personalised audio management. Equipped with a built-in loudspeaker, microphone and headset connectors, the new Wall / Desktop Panel caters to a diverse range of audio applications.

The Q310 is powered via a PoE switch or PunQtum's speaker station and includes GPIO for event-driven actions, from cueing lights in a theatre to remote announcements in event management. This robust and user-friendly system guarantees clear, real-time communication and integrated automation for a more streamlined and efficient workflow to meet the standards of modern venues.

"We're thrilled to return to ISE with the Q310," says Anna Radig. "This event provides a fantastic opportunity for our users to take an up-close look at our solutions. The Riedel team will perform live demonstrations of our range of
