REAN Power X Series

This new ruggedized, harsh environment power connector series performs precisely as its striking, ergonomically stylized, form factor suggests. Molded from V0 raw materials and rated to UL 94V-0, the IP65 certified Power X Series provides high levels of fire retardant, dust and moisture resistant protection.

A CBC connector – a connector with breaking capacity – Power X Series components are certified according to EN/UL 60320-1, with the cable connectors accepted as a component for cord sets according to IEC 60799, ensuring true mains breaking capability.

Power X Series is also certified as fully compatible with NEUTRIK powerCON True1 products. The robust design and high-reliability functionality are met within a market leading cost-performance ratio; a major feature of all REAN connector product series.

REAN Product Manager Tommy Huang says. “As a world-leading provider of connectors to the entertainment production industry, REAN’s Power X Series offers an amazing feature set at an unrivalled cost-performance point, providing for smart efficiencies across a wide range of audio, lighting, video, film and TV broadcast applications.”
