RF Venue Essentials Now Available in D-Tools

RF Venue’s aftermarket essential accessories for wireless microphone and in-ear monitor systems are now available through the integrated product library of D-Tools – the industry leader in easy-to-use, highly accurate core business software for low-voltage system integration firms.

With over 10,000 projects completed worldwide, RF Venue has established itself as the leading provider of antennas, RF signal distribution systems, filters and other unique tools that eliminate signal dropouts and interference for any brand wireless system. D-Tools pioneered the software category of data-based proposal, system design and field service management with its award-winning System Integrator (SI) computer software and the companion, D-Tools Cloud, available for all devices from computers to smartphones. D-Tools users can now natively include RF Venue wireless audio essentials in D-Tools software-generated project documentation, from quotes to purchasing to system wiring and layout.

“RF Venue system integration customers are currently using D-Tools to design, bid and win A/V projects of all kinds,” commented RF Venue Chief Innovation Officer Chris Regan. “We’re excited for our clients to now have the full line of RF Venue essential accessories integrated with D-Tools software to make designing and quoting wireless projects simpler, with up-to-date pricing and product details pre-loaded in the D-Tools library.”

A special extended 45-day free trial of D-Tools Cloud is available from RF Venue’s D-Tools partner page.
