

sE Electronics V8

sE Electronics introduces the V8, a premium dynamic handheld vocal microphone engineered for vocalists who expect more from their live sound. Built on the proven foundation of the V7, the V8 takes vocal performance to the next level with a newly developed DMCV8 dynamic capsule, delivering exceptional clarity, natural detail, and powerful vocal presence. Its highly focused supercardioid pickup pattern keeps the focus on your voice while helping minimize unwanted stage bleed, while the rugged all-metal construction and integrated shock protection are built for the demands of live performance.

The V8 will also be available in MC1 (Shure-compatible) and MC2 (Sennheiser-compatible) wireless capsule formats, allowing seamless integration into existing wireless systems. Both wireless options will be offered in Graphite Gray and Matte Black, giving performers and rental houses a consistent, premium look across wired and wireless setups. This ensures the same V8 sound and performance can be carried across any stage configuration without compromise.

The V8 is built around the new premium DMCV8 capsule, an evolution of the

technology that made the V7 a global standard. Engineered for higher clarity and natural detail, the DMCV8 delivers a balanced midrange, extended low-end response, and impressive high-frequency detail. Vocals sound open, natural, and controlled, sitting perfectly in the mix with minimal EQ required.

Combined with its supercardioid design, the capsule provides exceptional isolation and consistency, ensuring every performance translates with precision and impact.
