Sennheiser & Lumens Meeting Spaces at Taiwan HQ

Sennheiser, a company with expertise in advanced audio technology that makes collaboration easier, has partnered with Lumens Digital Optics Inc. to create a professional conferencing demo space at Lumens' headquarters in Taiwan. The collaboration highlights the seamless integration of Sennheiser's TeamConnect Ceiling 2 (TCC 2) with Lumens' CamConnect Pro voice-tracking camera system – offering a smarter, more engaging conferencing experience. The installation demonstrates how combining best-in-class audio and video technology can solve real-world AV challenges and deliver unprecedented meeting equity. Designed for effortless operation and simple deployment, the solution enables automatic camera tracking and precise voice pickup, significantly enhancing hybrid communication experiences.

Sennheiser's TCC 2 is a ceiling array microphone featuring dynamic beamforming technology. It delivers an ultra-narrow and highly accurate voice capture beam, which detects the speaker's position and transmits that location data to the Lumens

system. This allows the cameras to automatically track and frame the active speaker, with no additional coding or complex configuration required. Lumens' CamConnect Pro is an advanced speaker tracking and auto-switching multi-camera processor. Equipped with AI for precise people tracking, the system autonomously controls up to four IP PTZ cameras, intelligently directing each shot and switching angles in real time to capture each speaker clearly and naturally.

The result is a scalable, easy-to-deploy solution suitable for a wide range of professional environments, including council chambers, boardrooms, classrooms, and auditoria. By automating production elements and reducing the need for manual control, the system enhances both meeting efficiency and inclusivity. "This collaboration reflects our shared commitment to creating powerful, flexible conferencing solutions that support more inclusive and productive meetings," says Jessica Wong, Business Communications Sales Lead, Hong Kong & Taiwan at Sennheiser. "The integration of our TeamConnect Ceiling 2 microphone with Lumens' CamConnect Pro camera system delivers a seamless, high-performance experience that's easy to deploy and manage."

The integrated solution will be demonstrated live at InfoComm Asia 2025 in Bangkok, Thailand from 23–25 July. To see the system in action and learn more about how the integration works, watch the partner interview here.
