Sennheiser TeamConnect Ceiling Medium Tile

Sennheiser, a company with expertise in advanced audio technology that makes collaboration and learning easier, is excited to announce a new installation variant for its TeamConnect Ceiling Medium (TCC M) - the TeamConnect Ceiling Medium Ceiling Tile (TCC M CT) - which will be unveiled for the first time at Integrated Systems Europe (ISE) 2025 at booths 3B500 and 3B550 at the Fira Barcelona Gran Via in Barcelona, Spain on February 4 - 7.

The TCC M CT allows for even easier installation of the TCC M into suspended grid ceilings, thereby reducing installation time and costs for integrators on site. The tile comes in a 60 cm square solution and a 2 ft square solution, primarily for the US market. The new ceiling tile rounds out the TCC Solutions offering. Its sleek design blends into any environment making the TCC M the most versatile ceiling solution to fit every space. TCC M CT will be available as an assembled kit including a TCC M, front plate and safety ropes. For retrofit installations, the front plate can be ordered as an accessory.

The TCC M allows integrators the versatility to offer elevated meeting experiences across a range of flexible and hybrid meeting spaces and learning environments. With its adaptive, intelligent beamforming technology, the TCC M ensures Trusted Sennheiser Audio Quality every time. Seamless integration with single cable mode and numerous design and installation options ensure TCC M transforms any room into a hub of collaboration.

The new TCC M CT will be sold as an assembled kit at the same dealer and retail prices as current TCC M flush and surface mounted kit options for every region. General availability is expected in Q2 2025.
