

# Sennheiser Profile Wireless Bluetooth Connectivity

Great news for all owners of a one-channel or two-channel Profile Wireless set: the latest firmware update v 5.0.0 adds Bluetooth functionality to the compact microphone system. Creating a minimalist recording set-up, the clip-on mic can be directly paired with mobile phones, laptops or tablets that offer high-quality Bluetooth LE Audio (LC3 codec) or Bluetooth Classic.

“The free firmware update unlocks new possibilities, enabling creators to eliminate the receiver between the Profile Wireless clip-on mic and their mobile phone. This clears the smartphone connector for other usage and makes the set-up as compact as possible,” says product manager Hendrik Millauer. With the latest firmware update v 5.0.0, the Profile Wireless clip-on mic can be directly paired with a mobile phone via Bluetooth LE Audio or Bluetooth Classic, depending on the model. As usual, the clip-on mic can be fitted with an external lavalier mic, creating a very unobtrusive miking solution. Connecting an external microphone will automatically disable the built-in mic. The clip-on mic can also be used as a mini-transmitter for an unobtrusive external lavalier mic

“For highest audio quality, the Profile Wireless receiver is a must,” shares Millauer. “LE Audio with LC3 will provide creators with good audio quality and latency for any recording where ease of use and compactness are paramount. With a Bluetooth Classic connection, broad compatibility to smart devices and laptops is given but users will have to sacrifice some of the quality that the future-proof Bluetooth LE

## Sennheiser Profile Wireless Now with Bluetooth Connectivity
