Sennheiser Q-SYS Control for TeamConnect Ceiling

Sennheiser, a company with expertise in advanced audio technology that makes collaboration and learning easier, today announced the release of its new Q-SYS control plugin for the TeamConnect Ceiling Medium (TCC M). As part of the Q-SYS Ecosystem, software and hardware manufacturers collaborate with Q-SYS to create market-ready solutions that integrate seamlessly with its cloud-manageable audio, video and control platform. Sennheiser worked closely with Q-SYS, which has fully vetted and endorsed the Sennheiser TCC M plugin integration with a Q-SYS Certified (developed with Q-SYS and supported by Sennheiser and Q-SYS) badge.

“We are thrilled to once again collaborate with Q-SYS to develop the TCC M plugin,” said Charlie Jones, Sennheiser’s Global Alliance and Partnership Manager. “This plugin, along with others from our ongoing collaboration, ensures that integrating the Sennheiser microphone portfolio with the Q-SYS cloud-manageable audio, video, and control Platform is as efficient and straightforward as possible.”

Now available in Q-SYS Designer Asset Manager, the Q-SYS control plugin for TCC M offers direct management of LED control, audio levels, output gain, mute functions, Sennheiser TruVoicelift, and speaker positioning within the Q-SYS control system.

This new addition broadens the existing Sennheiser Q-SYS plugin portfolio, which already includes TCC 2 microphone and SpeechLine Digital Wireless microphone system, further expanding the potential for drag-and-drop configuration of Sennheiser devices within any Q-SYS system. Additional Sennheiser Q-SYS compatible products can be found on the Q-SYS partner page on the Sennheiser website.

The Sennheiser TCC M, when used alongside Q-SYS, is the ideal solution for transforming mid-sized meeting environments into high-impact spaces. With features like Intelligent Noise Control and TruVoicelift, the TCC M ensures crystal-clear audio, making every voice heard, whether in the room or across hybrid settings. This makes it perfect for dynamic spaces that need to balance functionality with simplicity. For a deeper look at how the TCC M enhances mid-sized meeting spaces, check out our blog post here. By leveraging this integration, organizations can maximize the potential of their mid-sized spaces, creating environments that are not just functional but pivotal to collaboration and productivity.

"We are proud to further our collaboration with Sennheiser to create a plugin integration that enables elevated experiences across a range of high-impact spaces," said Gary Evans, Director of Alliances and Ecosystem Tech Ops, Q-SYS.
